ELECTRONIC WARFARE

A special issue of the IEE Proceedings, Part F

Editors: M. C. Pinches, Dr. J. Clarke, Dr. P. M. Grant.

Electronic warfare techniques were initiated during the Second World War as radio countermeasures. It is now appreciated that the capability to detect the location of enemy equipments and deploy effective countermeasures is very effective in minimising hostile threats and maximising the effectiveness of one's own weapons.

The fast build up in arms and the significant advances in signal processing techniques over recent years have stimulated interest in electronic warfare to such an extent that the projected international western-world budget is currently in excess of £3,000 million.

This special issue provides an insight into the most recent developments in electronic support measures, electronic countermeasures, and electronic counter countermeasures.

Available now for only £12.00 ($27.00)

VISION AND SOUND

A special issue of the IEE Proceedings, Part A

Editors: Dr. B. Townsend and P. J. Darby MBE

Available now for only £12.00 ($27.00)

Since 1978, when the IEE published a special issue of *Electronics Record* on 'Pal colour television', the broadcasting world has altered dramatically.

This special issue covers developments in the whole field of broadcasting and programme distribution, and in the related aspects of home entertainment and information technology, together with reviews of the future trends within these different areas.

The scene is changing rapidly, but it is possible to look with pride on existing achievements as we contemplate the exciting developments which are likely to affect us in the near future.

IN-DEPTH COVERAGE OF

- **Digital television coding standards**
- **Digital techniques in the future television studio**
- **Digital television networks**
- **Development of video cameras and recorders for lightweight television production**
- **Digital techniques in film scanning**
- **The Television Consistency Index: Formulation and preliminary tests**
- **Cable television**
- **Transportable satellite up-links: Towards SNG?**
- **Television receiver design: Recent trends and applications**
- **Direct broadcasting from satellites**
- **Extended-definition television service**
- **Unattended television and radio transmitters**
- **Radio and television studio testing**
- **Enhanced UK teletext: Level 4 alphageometrics**
- **Wind- and sun-powered transmitters**
- **Citizens-band radio**
- **Multiple sound channels in satellite broadcasting**

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC database. Information is dispatched weekly on 150 mm × 100 mm (6″ × 4″) cards.

TOPICS

This is an SDI service based on standard profiles. There are over 70 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.
